Garman S.C., Hannick L., Zhu A., GarDoczi D.N.;

The 1.9 A structure of alpha-N-acetylgalactosaminidase: molecular basis of glycosidase deficiency diseases.";

Structure 10:425-434(2002).

-! CATALYTIC ACTIVITY: Hydrolysis of terminal non-reducing N-acetyl-D-galactosamine residues in N-acetyl-alpha-D-galactosaminides.

-! SUBCELLULAR LOCATION: Lysosomal (By similarity).

-! SIMILARITY: Belongs to the glycosyl hydrolase 27 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gallus gallus (Chicken).

Novel human alpha-galactosidase polypeptide useful for treating lysosomal storage diseases.

Claim 7; Page 49-50; 88pp; English.

The invention relates to human alpha-galactosidase truncated at the carboxy terminus and the production of enzymatically active recombinant human and animal lysosomal enzymes. The invention is useful for producing lysosomal enzymes for treating lysosomal actorage diseases, producing altered or mutated proteins, enzymatically active or otherwise, to serve as precursors or substrates for further in vivo or in vitro processing to

The invention relates to human alpha-galactosidase derivatives and the nucleic acids encoding them. The polypeptides are used in a method for producing active recombinant human and animal lysosomal enzymes in a plant expression system. The enzymes can be used in enzyme replacement therapy for the therapeutic treatment of human and animal lysosomal diseases. This sequence represents a human alpha-galactosidase derivative polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                               DSCISEKLFMEWAELMVSEGWKDAGYEYLCIDDCWWAPQRDSEGRLQADPQRFPHGIRQL 120

a specialised industrial form for research or therapeutic uses, to produce more effective therapeutic enzyme, for producing antibodies against lysosomal enzymes for medical diagnostic use, and in any commercial process that involves substrate hydrolysis. The present sequence is human rGAL-12 protein

The present invention relates to novel galactosidase (Gal) proteins such as rGAL-12, rGAL-25 or rGAL-25R. The methods and compositions of the present invention are useful for producing recombinant lysosomal enzymes for enzyme replacement therapy for treating human and animal lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Rabry disease and Tay-Sachs disease. The present sequence is human wild type rGAL-12 protein used in the exemplification of the

                                                                                                                                                                                                                                                                                        enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (GRIL/)
                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to nucleotide encoding galactosidase (GAL). The invention is useful in gene therapy. The polynucleotides and polypeptides are useful in treating human and animal lysosomal storage diseases. e.g. Pabry's disease and Gaucher's diseases. The present sequence is human GAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DSCISEKLFMEMAELMVSEGWKDAGYEYLCIDDCWMAPQRDSEGRLQADPQRFPHGIRQL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gauchers disease; metabolic; neurological disease; niemann pick disease; genetic disorder; Fabry disease; metabolic disorder; tay sachs disease; antilipemic; cns-gen.; lysosome storage disease; alpha-galactosidase;
by the plant expression system. The invention is useful in enzyme replacement therzpy for treating lysosomal storage diseases unch as Gaucher's disease, Niemann-Pick disease, Pabry's disease and Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic gubstrate hydrolysis. The present sequence is the

                                                                                                                                                                                                The present invention relates to the production of human and animal lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alphagalactosidase (Gal) enzymes having a post-translational modification provided by the plant expression system. The invention is useful in provided by the plant expression system. The invention is useful in as Gaucher's disease, Niemann-Pick disease, Fabry's disease, Tay-Sachs disease, Hurler's syndrome and Hurler-Schaie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the human alpha-galactosidase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GPRSYTIAVASLGKGVACNPACFITOLLPVKRKLGFYEWTSRLRSHINPTGTVLLOL 417

The invention relates to human alpha-galactosidase truncated at the carboxy terminus and the production of enzymatically active recombinant human and animal lysosomal enzymes. The invention is useful for producing lysosomal enzymes for treating lysosomal storage diseases, producing altered or mutated proteins, enzymatically active or otherwise, to serve as precursors or substrates for further in vivo or in vitro processing to produce more effective therapeutic enzyme, for producing antibodies against lysosomal enzymes for medical diagnostic use, and in any sequence is human rGAL-8 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

Human rGAL-8 protein.

```
The invention relates to nucleotide encoding galactosidase (GAL). The invention is useful in gene therapy. The polynucleotides and polypeptides are useful in treating human and animal lysosomal storage diseases, e.g. Fabry's disease and Gaucher's diseases. The present sequence is human GAL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        recombinant human and animal system that can be used in enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human alpha-galactosidase derivatives and the nucleic acids encoding them. The polypeptides are used in a method for producing active recombinant human and animal lysosomal enzymes in a plant expression system. The enzymes can be used in enzyme replacement therapy for the therapeutic treatment of human and animal lysosomal diseases. This sequence represents a human alpha-galactosidase derivative polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ANYVHSKGLKLGIYADVGNKTCAGFPGSFGYYDIDAQTFADWGVDLLKFDGCYCDSLENL 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SILDWISFNOERIVDVAGPGGWNDPDMLVIGNFGLSWNOOVTOMALWAIMAAPLFMSNDL 300
                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel galactosidase (Gal) proteins such as rGAL-12, rGAL-25, r-GAL-25 or rGAL-25R. The methods and compositions of the present invention are useful for producing recombinant lysosomal enzymes for enzyme replacement therapy for treating human and animal lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Pabry disease and Tay-Sachs disease. The present sequence is human wild type rGAL-8 protein used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                            lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alpha-glacated as enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases and ray Sachs disease, Niemann-Pick disease, Pabry & disease and Tay Sachs also useful in researches for developing new approaches to medical recatment of lysosomal storage diseases and ray Sachs also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the human alpha-galactosidase protein.
                                                                                                                                                                                                                      for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polypeptides useful for producing lysosomal enzymes in plants to be utilized in enzyme replacement therapy or for the therapeutic treatment of human or animal lysosomal storage diseases, e.g. Gaucher's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                      Gauchers disease; metabolic; neurological disease; niemann pick disease; genetic disorder; Pabry disease; metabolic disorder; tay sachs disease; antilipemic; cns-gen.; lysosome storage disease; alpha-galactosidase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocorebrosidase (GCB, GCR) and alphatinvention relates to glucocorebrosidase (GCB, GCR) and alphational adalestic to the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, planty's disease, planty's diseases uch also useful in researches for developing new approaches to medical recating in researches for developing new approaches to medical interaction is streatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the human alpha-galactosidase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MOLRNPELHIGCALALRFLALVSWDIPGARALDNGLARTPTWGWLHWERFMCNLDCQEEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 DSCISEKLIPMEMAELMVSEGWKDAGYEYLCIDDCWMAPQRDSEGRLQADPQRFPHGIRQL

                                                                                                                                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human alpha-galactosidase truncated at the carboxy terminus and the production of enzymatically active recombinant human and animal lysosomal enzymes. The invention is useful for producing lysosomal enzymes for treating lysosomal storage diseases, producing altered or mutated proteins, enzymatically active or otherwise, to serve as precursors or substrates for further in vivo or in vitro processing to a specialised industrial form for research or therapeutic uses, to produce more effective therapeutic enzyme, for producing antibodies against lysosomal enzymes for medical diagnostic use, and in any commercial process that involves substrate hydrolysis. The present

producing active recombinant human and animal lysosomal enzymes in a plant expression system. The enzymes can be used in enzyme replacement therapy for the therapeutic treatment of human and animal lysosomal diseases. This sequence represents a human alpha-galactosidase derivative polypeptide of the invention.

```
The invention relates to nucleotide encoding galactosidase (GAL). The invention is useful in gene therapy. The polynucleotides and polypeptides are useful in treating human and animal lysosomal storage diseases, e.g. Fabry's disease and Gaucher's diseases. The present sequence is human GAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ADGYKHMSLALNRIGRSIVYSCEWPLYMWPFQKPNYTEIRQYCNHWRNFADIDDSWKSIK 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 3, Ap

Patent No. 5382524

GENERAL INFORMATION:

APPLICANT: Desnick, Robert J.

APPLICANT: Bishop, David F.

APPLICANT: Manney Anne M.

TITLE OF INVENTION: ACTIVE ALPHA-N-ACETYLGALACTOSAMINIDASE

NUMBER OF SEQUENCES: 24

CORRESPONDENCES: 24

CORRESPONDENCE ADDRESS:

ADDRESSEE: PENNIE & EDMONDS

STREET: 1155 Avenue of the Americas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ZIP: 10036

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Expression of Biologically
                                                                                                                                                                                                                                                                                                                                                                                                             Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 7, Application US/08261577

Patent No. 5580757

GENERAL INFORMATION:
APPLICANT: Desnick, Robert J.
APPLICANT: Bishop, David F.
APPLICANT: Dannou, Yiannis A.
ITILE OF INVENTION: Cloning and Expression of Biolog
TITLE OF INVENTION: Active alpha-Galactosidase A
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSE: Pennie & Edmonds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   resi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  JC4522

JC4522

Japha-galactosidase (EC 3.2.1.22) A precursor - mouse

NyAlternate names: alpha-D-galactoside galactohydrolase
C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Date: 08-Reb-1996 #sequence_revision 19-Apr-1996 #text_change 09-Jul-2004
C;Accession: JC4522
C;Accession: JC4522
C;Accession: JC4522
C;Accession: JC4522
A;Title: Structural organization and expression of the mouse gene encoding alpha-galacto

A; Reperimental source: strain williams
C; Punction:
A; Experimental source: strain williams
C; Punction: atalyzes hydrolysis of melibiose into galactose and glucose
C; Superfamily: alpha-galactosidase
C; Superfamily: alpha-galactosidase
C; Keywords: glycosidase; hydrolase

## Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.
